Using the Acuter 10x42 Binoculars

Set up the binoculars

1. Remove the interconnected lens covers. You will look through the binoculars from this end.
2. Remove the two plastic lens caps by gently squeezing the latches on their outer edges.
3. Hold the binoculars up to your eyes to adjust the barrels. Firmly push the barrels closer together or pull them further apart until you see a single circular field of view.

Focus on an object

1. Set the right-eye focus to 0 by matching the white dot on the underside of the dial to the 0 setting.
2. Cover the front right lens with your hand.
3. With both eyes open, use the left lens to locate an object.
4. Rotate the focusing wheel at the centre of your binoculars until the object is in focus.
5. Cover the front of the left lens with your hand.
6. With both eyes open, use the right lens to locate the same object.
7. Rotate the right-eye focus until the object is in focus.
8. The image should now be in focus in both lenses.
9. When the binoculars are not in use, replace lens and eyecup covers and return the binoculars to the case.

Clean the binoculars

- Body: Wipe with a damp cloth or disinfectant wipe.
- Lenses: Wipe with a microfibre cloth or lens tissue ONLY. Please DO NOT use cleaning solution as it will strip the coating on the lenses.

Caution

- Never look at the sun with binoculars or with the naked eye. Permanent eye damage will result.
- Do not submerge binoculars in water.
